Objective

Software Engineer specializing in scalable mobile application development and cloud architecture, with 2+ years of experience in Flutter-based mobile apps, AWS backend systems, and IoT integration. Seeking a part-time role to leverage expertise in backend development and connected-device solutions, delivering high-performance, production-ready software engineering across full-stack and cloud environments.

Education

SRM Institute of Science and Technology		<i>Chennai, TN</i>
B.Tech, Computer Science and Engineering	Expected 2028	CGPA: 9.94
B.Tech Honors in Financial Technology	Expected 2027	CGPA: 10.00
Awarded Top Achiever (First Year) by the Department of Computing Technologies		

Skills

Languages	Java, Dart, Python, C/C++, SQL
Cloud & DevOps	AWS Lambda, RDS, S3, SSM, Amazon Bedrock (Titan V2), Git, CI/CD Pipelines
Frameworks/Tools	Flutter, React, Node.js, Firebase, REST APIs, API Development
IoT Technologies	ESP32, Arduino, Sensors, MQTT, Embedded Systems
Soft Skills	Problem Solving, Team Collaboration, Communication, Time Management

Experience

Application Developer Intern	March 2026 – Present
Printellect Innovations	<i>Chennai, TN</i>
- Managed cloud deployments and system monitoring for production mobile applications, streamlining IoT device integration into the company's product pipeline. (Google Play Store) - Delivered IoT integration improvements that enhanced real-time data reliability across connected hardware devices in the product ecosystem.	
Application Developer Intern	June 2026 – Present
Tellwell Digital Services	<i>Remote</i>
- Developed and shipped Tellwell's Flutter-based mobile application end-to-end, building core user-facing features that improved user engagement across the platform. - Architected and managed AWS backend infrastructure including Lambda functions, RDS databases, S3 storage, and SSM for secrets management, supporting scalable systems in production. - Designed and implemented REST APIs connecting the mobile frontend to cloud backend services, enabling seamless data flow across the full application stack.	

Projects

- Sephela** – Enterprise platform for GenAI-based automated analysis and risk scoring of fraudulent Android APKs for banking cybersecurity teams, leveraging Python programming and cloud architecture to automate threat detection at scale.
- BusMitra** – Real-time bus tracking system combining Flutter mobile application development with a backend analytics platform for live location sharing and arrival-time prediction, improving public transport reliability and fleet monitoring. [Try it out](#)
- Gigkavach** – AI-powered mobile platform delivering parametric income insurance for food-delivery gig workers, auto-triggering disruption payouts (rain, AQI, flooding) via real-time API monitoring with zero manual claims filing. [Try it out](#)

Achievements and Campus Involvement

- First Place, [Innofusion '26](#) – hackathon organized by the DSBS Department
- First Place, [PokeVerse Ideathon](#) – organized by SRM ACM SIGKDD
- [IBM Android and iOS Application Developer Certification](#) | [Salesforce Certified Agentforce Specialist](#) | [Oracle Agentic AI Certified Foundations Associate](#)
- Technical Team Member – Google Developer Groups, Qwiklab Developer Club, Microsoft Student Ambassador, Coding Ninjas 10X
